Business Rules

- The employee who is the manager of a project must complete a project schedule
- In said project schedule, the manager must determine the tasks that will be performed to start and finish the project
- Each employee has many skills, and many employees have the same skill
- Each skill has a skill id, description and rate of pay.
- TCS pools all of its employees by region, and from this pool, employees are assigned to a specific task scheduled by the project manager.
- Each project task can have many employees assigned to it, and a given employee can work on multiple tasks.
- An employee can
- The date on which an assignment is closed does not necessarily match the ending date of the project schedule because a task can be completed ahead or or behind schedule.
- The project manager is assigned when the project is created and remains for the duration of the project.

Constraints

- Each employee can only work on a customer's project in they state they live.
- The worklog is filled out on only Fridays at the end of the month
